

Mini Pest Repeller

Directions

1. Locate area closest to infestation. If there is no current infestation locate a wall socket in a central location in the structure to be protected. If you have multiple units, place them evenly through out the building.
2. Plug the units in
3. A middle light will flash indicating the Super-Sonic waves are working.
4. The LED night light will light up automatically in dark.
5. You can move the units at any time to cover areas of heavy infestation.

Coverage

In Optimum Conditions covers up to 2,000 Sq. FT (185 Sq. Meter). For optimum coverage plug a unit in each room. It is normal to see an increase of pests with any pest control during the first couple weeks after installation. The Pests are simply being flushed from the walls and hiding places. After a little time they will begin to disappear, until they are gone.

Economical and Safe
