

# PestKicker

~HIGHT POWER SUPERSONIC PEST REPELLER~

The **PestKicker** is designed to repel mice, rats, roaches and most crawling insects in spacious area. It is perfect for warehouses, restaurants, food distributors and other similar large venue suffering from rat problems. Laboratory research has shown ultrasonic sound waves attack the auditory and nervous systems of most common pests causing them pain and discomfort. These high-intensity sound waves will let pests give up their source of food, water as well as shelter and move on. Most importantly, the advanced transducer module inside brings this product a high level of effectiveness.

The **PestKicker** will not interfere with television, radios, electronic burglar alarms, fire or smoke detectors, pacemakers, hearing aids or other electronic equipment. Do not harm humans and pets, either.

## FEATURES

- λ **Spacious Places Available:** The ultrasonic sound emitted by the **PestKicker** can travel up to 4,500 ~ 5,000 square feet in an open area, however, the sound will not penetrate solid barriers.
- λ **Test Button:** After plugging it in with AC adapter, a red LED indicator light on the front of the unit will light up, letting you know that it is functioning properly. The test button behind the unit is used as a testing mode so that you can hear the unit sound off and ensure that is activating.
- λ **Frequency Adjustment Knob:** The shrill, siren-like sound generated stimulates insect hearing continually. You can selectively adjust the ultrasonic range of 18,000Hz to 32,000Hz that an adjustment VR knob allows the rate to be varied to different pests.

## USAGE

Gently turn the **Frequency Knob** clockwise toward the “Hi” setting. This will allow you to hear the sound emitted by the unit to find the best frequency setting for your own use. As the “Hi” setting, by depressing the test button will lower the ultrasonic frequency to an audible sound. To find the best frequency setting, we recommend that you start with the “Lo” frequency. If the situation does not show any progress within two weeks, adjust the frequency as needed. For optimal coverage, plug a unit in each room without anything blocking or covering the device or move its place as well as twist the knob per certain period of time. The **PestKicker** is capable of getting rid of pests and preventing future invasion without using dangerous toxic chemicals, poisons or traps! It is normal to see a slight increase in the amount of pests during the first few weeks after installation. The pests are simply being flushed out of the walls and their hiding places, and will soon disappear all together.

## NOTICE

Do not place the **PestKicker** behind solid obstructions like furniture or draperies. Also, do not place the **PestKicker** outside where it can get wet.

## SPECIFICATIONS

Dimensions:	125 x 87 x 90 mm (one-speaker) 155 x 85 x 90 mm (two-speaker)
Weight:	160 g (one-speaker) 200 g (two-speaker)
Power supply: (AC adapter included)	100-120V/60Hz (UL/PSE) 220-240V/50Hz (GS/BS/SAA)
Frequency range:	18K-32KHz (manual control)
Output sound pressure:	115 dB x 1 (one-speaker) 115 dB x 2 (two-speaker)
