

Yellow Bug Light

Small & Trouble-Free Protection for Your Family

The Yellow Bug Light integrates with existing technologies with special light wave to keep mosquitoes away. It can operate 24 hours a day and running cost is kept to a minimum. It is eco-friendly and prevents future invasions without using toxic chemicals or traps!

Product Illustration

Product Features

Insect vision is spectrally different from human vision. Insects are attracted to light in the UV part of the spectrum. Conventional incandescent lights have transmission in the UV range, and bugs are attracted to it. Our Yellow Bug Light has a special yellow light wave making the light non-existent to insects.

NOTE: The effect might vary for different species.

Getting Started

Remove the Yellow Bug Light from its packaging. Plug the Yellow Bug Light into a wall socket and turn it on. If the socket has a switch, please ensure the switch is turned on as well. We recommend plugging it into the socket closest to where you see the mosquito problem or in a central area to cover your room. For optimum coverage, plug a unit in each room without anything blocking or covering the device. When you plug Yellow Bug Light in, the Indicator Light and the unit will light up, letting you know that it is functioning properly. **✖DO NOT PLACE IT OUTSIDE WHERE IT CAN GET WET.**
