

UP-185S

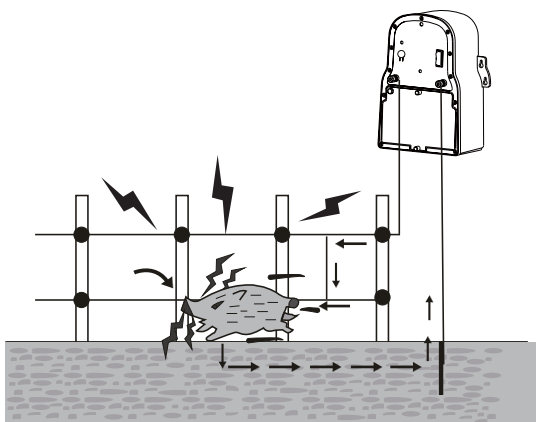

High Power Electric Fence

It is time to protect your farmland!

This device is useful for controlling the movements of wild animals, such as keeping wild boar from raiding crops.

When the animal makes contact with the fence, a circuit is completed and the animal receives a short high-voltage / low-current of electronic shock.

The complete parts are included

Special Feature:

Digimax Electric fences are designed to create an electrical circuit when touched by animals. The power generator converts batteries into a brief high voltage. One terminal of the power generator releases an electrical pulse along a connected wire about once per second. Another terminal is connected to a metal rod implanted in the earth, called "ground rod". Animals touching the wire and the earth simultaneously will complete an electrical circuit and will conduct the pulse, causing a painful electric shock to keep them away from the farmland.

Specification:

- * Dimension: 270.5 x 120 x 140 mm
- * Weight: 2.5 kg (batteries are not included)
- * Output Power: 5000 ~ 6000V
- * Power Supply: DC 12V (1.5V D size batteries x 8) / Solar Power System (Optional)

Solar Power System (Optional)
